**Fusion Advantage™** is the best finish in the industry, complete with a seven year warranty. You'll find the FA icon in many of our product collections.

Many of our steel products are protected by the Fusion Advantage, giving them a high gloss finish that won't rust, fade, peel, chip, crack, mold or mildew.

Anova™ is our new name. 5x is a new way to express our brand promise of excellence based on five elements – the 5 x-factors – that add extraordinary value to every Anova product.

Anova invited creative professionals, exceptional men and women who clearly possess the x-factor, to talk to us about products they love which possess the five elements shown above. You'll find our discussions with them between product portfolios throughout the book. We hope you'll find their points of view interesting and enlightening.

# Beauty

The beauty of Anova site furnishings is maintained by our patented Fusion Advantage™ process, which provides superior resistance to the elements. We continue to make first and lasting impressions through fresh, innovative designs that help create more beautiful spaces in both the public and private sphere.

# “The quality of design instills a feeling of comfort.”

---

**Hunter Beckham** finds the perfect blend of comfort and performance in his Ducati motorcycle.

---

My Ducati motorcycle, a 2006 Monster, is a beautiful piece of machinery with every detail integrated into the design of the bike as a whole. The Monster is a very stripped-down, less-is-more model that reveals its parts and pieces – and every element, even a bright yellow suspension spring, is thoughtfully considered and intentional.

I first saw my Ducati at a dealership in a room full of motorcycles, but the Ducati was just so pretty! The height, length, and girth were exactly right. The balance of the mirrors, the handle bars and the gas tank were handled beautifully. Then I did a little research and found that the company has an exceptional story of quality and longevity. Buying a Ducati is an investment, but it will last a long time. Many of my purchasing decisions are based on longevity and quality, which may actually be the same thing.

I’ve had the motorcycle for five years and the reputation of the Ducati brand manifests itself in the bike’s performance on the road. Everything down to the bolts and washers holding the bike together is about quality. The bits that hold my rear view mirror in place are equal to the whole. Design and quality go all the way through and that says something about the integrity of the company and why it has enjoyed such longevity.

It is essential to feel comfortable on your motorcycle. If you don’t feel comfortable, if you feel awkward when you’re pulling out of a driveway or passing an 18-wheeler on a freeway, chances are you could get hurt. The reliability of the Ducati bike, the fact that it is easy to handle and control, goes back once again to the level of design and quality. In a sense the quality encapsulates you when you are on the bike.

## **Profile**

Hunter Beckham is a Principal of SWT Design in St. Louis. He has over 15 years of landscape architecture experience with special interest in sustainable practices. Hunter is integrally involved with ASLA, serving on the Government Affairs Advisory Committee; as part of the Sustainable Design and Development Professional Practice Network; and as a current trustee and past president of ASLA St. Louis. Hunter serves on the St. Louis Regional Green Building Council. His favorite piece of technology is cruise control, because it helps him avoid speeding tickets.

Innovation in design  
meets Anova™ durability.  
Two distinctive portfolios  
create dynamic first and  
lasting impressions.

# Comfort

Comfort is an essential element in how people experience an environment.

This means making continuous improvements in design, materials and techniques with maximum user comfort in mind. Whether it's modifying the angle of a seat or developing technologies like Fusion Advantage™ to keep surfaces comfortable in any climate, at Anova™ we design for people, not awards.

# “Sustainable products have long life cycles.”

For **Marilu Knode**, design integrity means products that function well year after year.

I first bought my Sintesi Gogo dining chairs 15 years ago. Recently, I bought a few more because they are very comfortable and come in these beautifully light, playful colors. I have the chairs in vanilla, butter and lime. I love color and respond to it physiologically. Color brings light into a room and gives me energy. And these chairs have become the centerpiece of my dining room.

Gogo chairs are quite durable. This is not a product you replace or discard after a year even though they are made of plastic, which is often a cheap, throwaway material. But plastic can also be quite sophisticated and the Gogo chairs have a lasting design appeal, as well as durability. You can even use them outside. If they get dirty, just rinse them off.

I like these chairs, too, because the design takes into consideration how you use a chair and what it is that you want from a chair. The armrests flow organically from the seat and back and make the chair very comfortable, which facilitates the idea of having a nice, long meal with friends.

The design is modern, very Sixties, with a Mod or Pop sensibility, but also quite accessible. After all, I bought my first Gogo chairs in Milwaukee, which was “old school” at the time, but was also beginning to explode culturally. This tells us something about where good design can go and what it can do, as well as how aesthetics get recycled or continue to be relevant and appealing.

I think having these chairs makes me a little bit more proud of my living space, maybe a little more sociable and willing to invite people into my dining room. I’m always proud to have people sit down to a meal with these chairs. In my own work, I hope to create something that inspires people or helps to create a good experience and the Gogo chairs are certainly aligned with that intent.

## Profile

Marilu Knode is the Executive Director of Laumeier Sculpture Park in St. Louis, and the Aronson Endowed Professor of Modern and Contemporary Art at the University of Missouri St. Louis. She possesses a Master of Arts in Museum Studies from City University of New York City College. Marilu has worked in the museum and fine arts sector for more than 25 years. At Laumeier, her focus is on commissioning new works and creating strategic opportunities for artists brought into the community.

Timeless designs updated  
with new insights on  
ergonomics and comfort:  
The Classic Portfolio is  
inherently elegant and  
enduring.

# Quality

Anova™ has evolved, yet our commitment to quality is unwavering.

At Anova, the concept of quality encompasses design excellence, first-class materials and advanced manufacturing techniques that yield beautiful furnishings built to last; durable, well-made products at a tremendous value. And, we stand behind our warranty.

# “Every detail is carefully considered.”

**Tim Slazinik** talks about what makes the Mini Cooper an excellent product from dealership to driveway.

Before I bought my Mini Cooper I thought that Mini was a great brand – fun and interesting and different. And four years after buying my Mini, I still think it was a good decision. It’s a cool car. Every detail is carefully considered, not arbitrary.

Life inside the Mini Cooper is comfortable. There are small LED lights placed where a little light is useful – by the door handle, where the seat belt attaches – and you can change the color of the lights if and when you like. These little design moves are cool and since most of us sit in our cars more than we would like, those details help make our day just that much better.

The Mini Cooper is known for its look, but everything embodies quality. In four years, nothing has broken. I took the car in for one minor adjustment and even that was a good experience. The service person handed me the keys to another Mini and then called me when my car was ready. When you talk to the people at the dealership, you can tell they believe in the product. Word of mouth sells the car.

Right from the start, you have a different experience with the Mini brand. You can customize everything – the color, the stripes, the shift knob – so that you get a car that fits you. Your Mini is an extension of you. After you buy the car, you can go online and check on the progress of your car in what they call the “birth canal.” Today, it’s being painted. Then your Mini gets its wheels. You know the day it ships and its ETA. A great product has it all – design, function and service.

## **Profile**

Tim Slazinik is a Professional Landscape Architect at Arcturis, a multidisciplinary design firm in St. Louis. He received his Bachelor’s degree in Landscape Architecture from the University of Illinois in Urbana-Champaign. Tim is the President Elect of ASLA St. Louis, and serves as their Awards Committee Chair. He was a featured presenter at the Missouri Botanical Garden’s 2012 Earth Day Symposium.

# Responsiveness

We provide prompt, dependable service and delivery. Our customer service center is staffed at Anova™ headquarters and our network of sales representatives has immediate access to production and product development teams. Most Anova products and components are made in the USA, allowing us to control quality, costs and inventory.

# “It has opened up a new world of creativity.”

**Jennifer Gebhardt** finds empowerment and inspiration with her Nikon D60.

I've had a life-long interest in photography and when I was finally ready to invest in equipment, I chose the Nikon D60 DSLR. I couldn't be happier. Although the camera is a bit bulkier than its rivals due to a contoured and rubberized handgrip, that detail also makes it very pleasing to use. A place shaped for your thumb adds to user comfort and control.

Although the camera body is primarily plastic, which reduces the cost and weight, it feels substantial and balanced even if you attach a large, heavy lens. The lens attachment rings are made of metal, and snap together with a reassuring click that reminds me of a door closing on a really nice car. The sound lets you know that the lens is in place and also reflects the quality of the well-considered design details.

For someone making an initial foray into photography, the external settings and buttons are clean, minimal and very well organized. Everything is placed just where you want it. The menu and camera functions are also intuitive, yet complex enough to give me room to grow as a photographer. The camera is powerful without being intimidating. Despite its complexity, using the D60 quickly became second nature to me.

The D60's ease of use has helped to boost my ability and confidence. In fact, it has opened up a new world of creativity in portrait photography. Everything about the camera conspires to create a fun, inspiring experience.

## **Profile**

Jennifer Gebhardt is an Architectural Designer and LEED accredited professional at Christner, Inc. in St. Louis. She holds a Master's degree in Architecture from Harvard University. In 2009, Jennifer was voted a YWCA "Leader in The Workplace." She served as an Adjunct Professor at Maryville University from 2007-2008, is an active participant at all local BIM user groups, and is a member of the Humane Society's Women Leadership Council.

From parks to playgrounds,  
materials in our Natural  
Portfolio combine to  
add beauty, comfort and  
function in public spaces.

# Integrity

Honesty and integrity are core values at Anova.™ Integrity means that we work hard to deliver useful and sustainable products that offer value for customers and end-users alike. Integrity also means that we treat people well and we take our responsibilities - social, economic and environmental - seriously. We strive to be good citizens.

# “Integrity means doing the right thing when no one is looking.”

---

**Eric Gilbert** discusses the core principles that shape Anova™

---

At Anova, integrity also means that we are true to the precept that: “People come first”. It’s fundamental. We are first of all a community of people – and doing business is simply a network of transactions or interactions among people. If we create positive interactions by creating an atmosphere of trust and respect, we will also help our business to grow and to thrive.

The concept of integrity extends to being open and honest with our employees. We freely share information about Anova’s future direction and stress transparency. Through the recession, we found ways to increase wages and add dollars to 401(k) accounts, supporting our team at some expense to the bottom line. A conversation about taking the match down never arose.

We design for a long product life cycle and an enduring installation. We are true to our vision of “creating beauty and comfort in every public space,” designing for people, not awards. At a college campus, the facilities team or a general contractor is our customer, but the users are the students. Our purpose is to enhance the students’ lives and, at the same time, build our customers’ place in the world.

Lean manufacturing practices go hand-in-hand with sustainability and the concept of integrity. At Anova, all associates are focused on finding waste in the system and creating new ways to squeeze that waste out of production. By working leaner and making smarter use of energy every day, we are becoming more sustainable.

It goes without saying that Anova seeks to use materials with high recycled content. But sustainability isn’t just about materials. It’s a matter of taking ownership of the manufacturing process once we have the material. Thus, we are constantly finding ways to use less material, time and energy throughout Anova’s operations.

## **Profile**

Eric Gilbert is the CEO of Anova. He sets the vision, shapes the culture, and is ultimately responsible for the health of the business. Prior to being named CEO, Eric held positions at Anova as the Director of Manufacturing; Director of New Product Development; and Director of Marketing. Eric possesses a PhD in Chemical Engineering from the University of Washington, Seattle.

# Capabilities

## Design Integration

At Anova,<sup>™</sup> we control the entire design, engineering, and manufacturing process. The vast majority of our products are made in the USA. From preliminary sketches to completion on the manufacturing floor, our staff is dedicated to each project from beginning to end. This means our quality controls and engineering standards are never compromised. From the simple demand that our benches are engineered to hold 200 pounds per linear foot to a complex change in the angle of a bench back for greater comfort, the process is facilitated exclusively by Anova. We also service a comprehensive range of custom requests. We will work with you to identify all goals which are pertinent to the design and implementation of even the most challenging projects.

## Delivery Time

Quality doesn't have to mean long lead times. Anova leads the industry by shipping most orders within 10 days.

## Durability Testing

Not all site furnishings are created equal. Then again, not all site furnishings undergo the rigorous engineering and testing that we demand. Though every company can claim durability, there is only one company which designs, engineers and fabricates their product to out-perform every time.

## Customization

Anova offers several custom or commemorative furniture options on many benches, receptacles, tables and bike racks. Customization is a great way to promote your business, school or community. Anova's design team can work with you on special projects for other custom designs.

# The Fusion Advantage™

FA

## Patented protection exclusively available with the Fusion Advantage

Table tops, seating surfaces and receptacle bases protected by the Fusion Advantage have a thick plastisol coating that is permanently heat fused to heavy-duty steel, creating an impervious rustproof barrier. This oven-cured plastisol has an average thickness of ¼"

(including top and bottom coatings). Next, the plastisol is encapsulated with a richly tinted high performance powder coating that creates a seal against the elements and provides a finish unmatched in durability. This patented process ensures Anova™ components are highly resistant to fading and UV damage; impervious to common acids, salts and seawater; and resistant to mold, mildew and fungus.

Coating

## Seven-year warranty

Anova offers a standard seven-year warranty on any component featuring the Fusion Advantage, including any defects in materials and/or workmanship and further warrants against rusting, fading, peeling, chipping, cracking, mold and mildew.

## Unlike other furnishings, Fusion Advantage products will not have:

- Rusting
- Mold and mildew
- UV damage
- Coating breakdown
- Discoloration and fading

# Anova™ Complete Warranty

## Finish Warranty

Anova offers a standard seven-year warranty on all products including any defects in materials and/or workmanship and warrants the product finish will not fade. Anova further warrants the components featuring the Fusion Advantage™ will not rust, peel, chip, crack, mold or mildew for a period of seven years.\*

## Structural Warranty

Anova offers a limited twenty-year warranty against structural failure of all steel, aluminum and cast iron bench frames and bench assemblies, tables and table frames, trash receptacle and recycler frames, planter frames and bike racks. We offer a limited twenty-year warranty against structural failure of all recycled plastic products from splitting, fungal decay, and insect damage. Anova offers a limited five-year warranty against structural failure of all natural stone products.

## Other Warranty

Anova banners are covered by a three-year warranty from the date of purchase when installed on Anova banner brackets. Banners otherwise installed have a one-year warranty. Anova styrene signs are covered by a three-year warranty from the date of purchase.

### WARRANTY STIPULATIONS

The above warranties commence on the date of purchase. The structural warranty is only valid if the product has been assembled and installed per the instruction provided with each shipment and item. These warranties do not cover acts of misuse, abuse, accidents, lack of maintenance, vandalism or natural disasters. Any alterations to the product after delivery will void these warranties.

Should any failure occur within these periods, Anova will correct the part or parts by repairing or replacing the defective parts to your satisfaction, at no cost to you.

\*Unless otherwise noted

# Environmental Consciousness

Anova has been creating environmentally friendly products since 1970. To meet our customers' expectations for high-design, high-quality products that also help them achieve their sustainable goals, Anova adheres to the following practices:

- Utilization of recycled materials
- Manufacture of products for LEED certification
- Production of recyclable/long lasting products
- Adoption of environmentally sustainable processes and systems

## **RECYCLED MATERIALS**

Our recycled plastic lumber has a 95% recycled content by weight with at least 90% of that coming from post consumer content. This recycled plastic lumber does not emit or contain any VOC materials, and is considered to be low or non-toxic. On average, the steel used in our products is made of 70% recycled material and our aluminum extrusions are 85% recycled material.

## **LEED CERTIFICATION**

Bike racks enable specifiers to obtain LEED certification and credit requirements for their projects that qualify as "Alternative Transportation, Bicycle Friendly Site Planning". Smoking control products provide credits in the "Environmental Tobacco Smoke Control" category

by allowing means to locate smoking areas a safe distance from entrances and other non-smoking places. Anova also contributes to LEED certification credits by manufacturing products out of recycled metals and plastics.

## **RECYCLABLE/LONG LASTING PRODUCTS**

The metals and plastic used on Anova products not only contain recycled content, but can be recycled, as well. The natural wood and stone material found on various products in the line can also be recycled. Many of our products break down into components to make recycling easier. Anova designs products with high quality, low maintenance materials and finishes. For example, products with our exclusive proprietary Fusion Advantage coating clean without chemicals and still maintain a durable, high-gloss look. Most importantly, our products are built to last a very long time. Going well beyond the 5- or 7-year warranty, many customers have had our products in service for more than 20 years. That long life translates into minimized environmental impact.

## **ENVIRONMENTALLY SUSTAINABLE PROCESSES AND SYSTEMS**

Anova is constantly working to improve efficiencies in our production processes to reduce both energy consumption and scrap. In 2007, we changed from anodized coating to polyester powder coating in order to reduce pollutants created during the coating process. We also added reclaiming filters to our powder coating lines which reduce the amount of wasted material. Anova manufacturing locations are centrally located in the Midwest.

Nearly all product components come from suppliers less than 200 miles from our facilities. A majority of products ship to job sites within a 500 mile radius of one or both of our locations. Most Anova products ship in recyclable cardboard and/or recycled skids.

Since 1970, ANOVA™ has been a leader and an innovator in site furnishings that enhance the beauty and comfort of public spaces. We were the first to introduce aggregate panels. In the 1990s, we patented coating technologies that yield superior performance and durability. Today, Anova continues to push the boundaries of design and manufacturing to create first-quality products that provide value to our customers and elevate the life of our communities. Anova site furnishings create first and lasting impressions, building places that engage, inspire and will sustain over time.

# The Anova Timeline

**2012**

We created an industry-first iPad app and launched the new Anova brand.

**2011**

Eric Gilbert takes leadership of the company after holding positions as Director of Manufacturing and New Product Development, Director of Marketing and eCommerce Manager.

**2008**

We began sponsoring the Southern Illinois University of Carbondale's Industrial Design Program. This innovative collaboration allows students to benefit from the experience of designing products for the real world and offers the thrill of seeing a winning concept brought to manufacture. This program partners junior or senior level design students with Anova for a portion of the semester. The project focuses on how design can meet the demands of ergonomics and aesthetics along with cost, marketing and manufacturing realities.

**2005**

We became an ASLA corporate sponsor.

**1998**

Our coating technology was acquired and patented in our Winona, Minnesota plant.

**1993**

The St. Louis manufacturing plant adopts lean principles. Several associates that participated in the implementation are still with us today.

**1972**

The company was issued its first patent based on our design for the original 55 gallon trash receptacle.

**1970**

We sold our first receptacle as Clean City Squares. The first receptacles were assembled in a 500 square-foot warehouse on Washington Avenue in St. Louis. It had no heat and one light bulb hanging from the ceiling. During the first three years of the company's history, we purchased the parts and assembled the containers in a warehouse.
