

Aquatic Recreation Company

The More Water... The More Fun!

## Aquatic Recreation Company

is proud to be the leader in the evolution of water play by providing the most innovative, diverse, and interactive water play elements in the industry. Our products have been used throughout the world in spray parks, aquatic centers, hotels, resorts, campgrounds, fitness centers, housing developments, military bases, and amusement parks.

Caracas, Venezuela

### Big Water

ARC Structures and ground sprays provide large volumes of fun and safe water play.

### Durability

Only non-corrosive materials with UV resistant and easy to maintain coatings are used which are designed for outdoor environments and seasonal conditions.

### Interactive Play

Structures have been designed for fun interaction with structure movements that allow water to pour, dump, spray, wiggle, and spin creating unique water formations and creative play.

### Low Maintenance

All structures and ground sprays have non-clogging nozzles and are all self-draining for easy winterization.

### Fiberglass or Stainless Steel

ARC offers structures and ground sprays in both fiberglass and stainless steel. These versatile product options in material fabrications allow ARC to meet any client's needs and budgets when selecting water play features for pools or splash pads.

### Interchangeable Product Design

ARC products are surface mounted and easily interchanged allowing versatility in project design.

### Environmentally Friendly

ARC is the industry leader in promoting environmentally responsible recirculation systems. Our recirculation systems allow for splash pad design to focus on creating enhanced water play in a safe environment without being dictated by water consumption concerns.

### Safe

All structures are non-climbable with no pinching points or sharp edges.

### ADA Accessible

ARC products are designed for ADA Accessibility and interaction.

### Prefabricated Mechanical Systems

Whether the project requires a recirculation or city water system, our spray park systems are of the highest quality incorporating UL and NSF listed equipment. We prefabricate, pre-plumb, pre-wire, and pre-test our mechanical systems prior to leaving the factory. These steps insure that we're providing the highest quality systems that will be easy to install, operate and maintain.

The More Water... The More Fun!

Aquatic Recreation Company

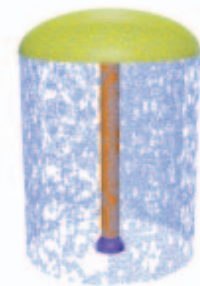

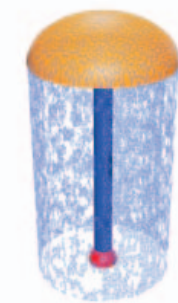

**ARC Standard Structures** are water play elements that have been developed and successfully used in water park and splash pad facilities. These structures are colorful and fun water play elements. They are made of non-corrosive materials and have internal manifolds and baffles to create crisp water formations. Standard structures are easy to install, virtually maintenance free and can be provided with an optional flow control valve.

**ARC Signature Structures** are some of the most innovative, interactive water play elements in the industry. These non-corrosive structures have been designed for direct interaction by users to create unique water formations and play only limited by the user's imagination. These creative structures are safe and appropriate for all age groups and encourage multiple user water play.

**ARC Multi Play Systems** are a way to combine Standard and Signature structures into a cost effective, attractive, and fun water play system. These impressive systems come with interactive flow control valves and optional colorful banners. Multi-Play Systems can be a center piece for your design or a stand alone water play element. These systems have been designed with internal distribution manifolds that minimize underground plumbing. The reduction of underground plumbing reduces installation costs, annual maintenance and provides years of carefree operation.

## ARC Ground Sprays

are fun, heavy, aerated, water formations. Sprays are designed for areas with no standing water to limited water depths. Patrons can interact with multiple spray displays by plugging individual sprays, causing remaining sprays to shoot higher. ARC Ground Sprays are designed to be self draining and are provided with plugs for easy winterization.

## Recirculation Systems

ARC is the industry leader in promoting environmentally responsible recirculation systems. These systems allow for enhanced water play without the wasting of water that traditional single pass domestic systems offer. ARC systems provide complete water quality management and failsafe controls that are safe and easy to operate. Recirculation systems are provided with the following, pre-plumbed, pre-wired components:

- UL Filtration Skid
- UL Control Panel
- Water Quality Management System
- UV Disinfection System
- Underground Water Reservoir
- UL Feature Pump Skid
- Distribution Manifold
- Activation Bollard
- Collector Boxes
- Drain to Waste Valve Box
- Optional Underground Vault Enclosure
- Optional Above Ground Skid Enclosure
- Optional Water Heater

Activation Bollard

## City Water Systems

ARC's city water systems are an alternative to recirculation systems when splash pads are in a controlled environment with limited usage. When using a city water system, water play activity selection should be elements with water conservation sprays to limit water consumption. City water systems are a cost effective approach for a splash pad project when water use is not a concern and water reclamation is designed in the form of a retention pond for re-absorption or irrigation. City water systems are housed in either above ground enclosures or below ground vaults. Equipment systems consist of the following components:

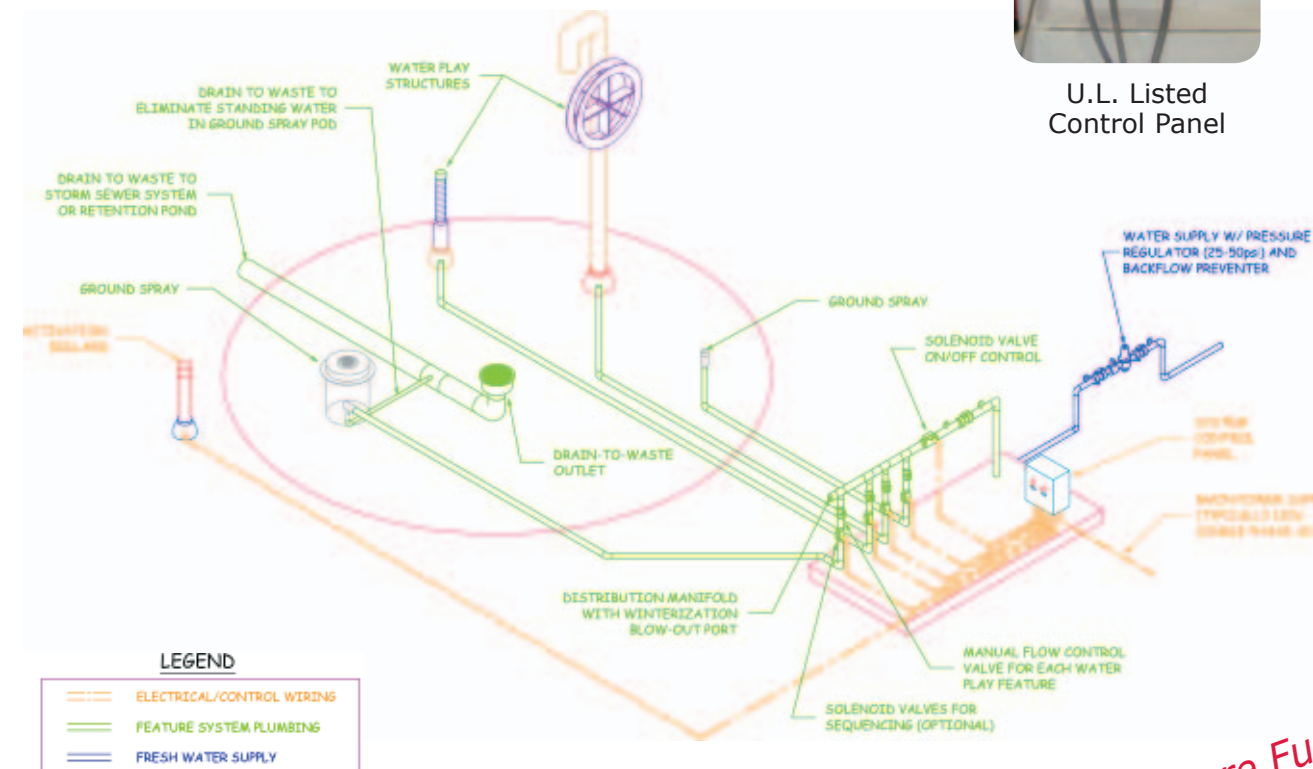

- UL Control Panel
- Water Distribution Manifold
- Drain-to-Waste Outlets
- Activation Bollard
- Optional Underground Vault Enclosure
- Optional Above Ground Enclosure

## Product Options

ARC believes in providing product versatility and design flexibility to meet your project specific requirements. Just a few of the customized options are as follows: flow patterns and flow rate adjustments, incorporating decorative banners or custom facility graphics, desired fabrication materials, interchangeable product design, interactive flow control valves, custom colors, custom theming, and total custom product designs.

## Customer Service

ARC offers a variety of project support services to insure project success for any size project. We believe in providing total project support... from concept thru to completion. ARC will give your project the attention it deserves.

## Design Concept Services

To aid you in design, ARC provides free splash pad layouts. These concepts help you visualize overall appearance, space usage, splash zones, and age appropriate areas. In addition, ARC provides overall project data and total project budgeting information to aid in design direction and scope of project.

## Construction Documents

ARC offers complete splash pad project construction documents. These documents can be used for project construction, local health department approval, permitting and receiving competitive bids on various aspects of work. If required, these documents can be stamped by a registered professional engineer in the state your project is located.

## Construction Supervision

To ensure the success of your project, ARC offers onsite construction supervision. Field supervisors will assist your selected installers with project layout, project sequencing of work, proper installation of materials, successful system startup and training.
