54. VENDOR EMERGENCY RESPONSE POINT OF CONTACT

The awarded vendor(s) shall provide the name(s), telephone, or cell phone number(s) of those individuals who can be contacted twenty-four (24) hours a day, seven (7) days a week where there is a critical need for commodities or services when the Governor of the State of Delaware declares a state of emergency under the Delaware Emergency Operations Plan or in the event of a local emergency or disaster where a state governmental entity requires the services of the vendor. Failure to provide this information could render the Bid as non-responsive.

In the event of a serious emergency, pandemic or disaster outside the control of the State, the State may negotiate, as may be authorized by law, emergency performance from the Contractor to address the immediate needs of the State, even if not contemplated under the original Contract or procurement. Payments are subject to appropriation and other payment terms.

55. SUBCONTRACTS

Subcontracting is permitted under this ITB and contract. However, every subcontractor shall be identified in the Bid (Attachment D) and agreed to in writing by the State or as are specifically authorized in writing by the Agency during the performance of the contract. Any substitutions in or additions to such subcontractors, associates, or consultants will be subject to the prior written approval of the State.

The Vendor(s) shall be responsible for compliance by the subcontractor with all terms, conditions and requirements of the ITB and with all local, State and Federal Laws. The Vendor shall be liable for any noncompliance by any subcontractor. Further, nothing contained herein or in any subcontractor agreement shall be construed as creating any contractual relationship between the subcontractor and the State.

If a company elects to be a subcontractor for another vendor, the subcontractor may not independently bid on this solicitation.

56. AGENCY'S RESPONSIBILITIES

STATE OF DELAWARE
NEW CASTLE COUNTY VO-TECH SCHOOL DISTRICT

The Agency shall:

- a. Examine and review in detail all letters, reports, drawings and other documents presented by the Vendor to the Agency and render to the Vendor in writing, findings and decisions pertaining thereto within a reasonable time so as not to delay the services of Vendor.
- b. Give prompt written notice to the Contractor whenever the Agency observes or otherwise becomes aware of any development that affects the scope or timing of the Contractor's services.
- c. When an ordering agency first experiences a relatively minor problem or difficulty with a vendor, the agency will contact the vendor directly and attempt to informally resolve the problem. This includes failure to perform by the date specified and any unacceptable difference(s) between the purchase order and the merchandise received. Ordering agencies should stress to vendors that they should expedite correction of the differences because failure to reply may result in an unfavorable rating in the execution of the awarded contract.
- d. The state has several remedies available to resolve non-performance issues with the contractor. The Agency should refer to the Contract Terms and Conditions to view these remedies. When a default occurs, the Agency should first review the contract to confirm that the issue is a part of the contract. If the issue is not covered by the contract, the state cannot expect the contractor to perform outside the agreement. If the issue is a part of the contract, the Agency must then contact the contractor, discuss the reasons surrounding the default and establish a date when the contractor will resolve the non-performance issue.
- e. If there is a performance deficiency, a Corrective Action Report (CAR) may be used. Complete this form to report concerns with vendors or commodities. Be sure to furnish as much detail as possible.

57. CONFIDENTIALITY

Subject to applicable law or the order of a court of competent jurisdiction to the contrary, all documents submitted as part of the vendor's Bid will be treated as confidential during the evaluation process. As such, vendor Bids will not be available for review by anyone other than the State of Delaware/Bid Evaluation Team or its designated agents. There shall be no disclosure of any vendor's information until a fully executed contract is received, unless such disclosure is required by law or by order of a court of competent jurisdiction.

The State of Delaware and its constituent agencies are required to comply with the State of Delaware Freedom of Information Act, [29 Del. C. § 10001, et seq.](#) ("FOIA"). FOIA requires that the State of Delaware's records are public records (unless otherwise declared by FOIA or other law to be exempt from disclosure) and are subject to inspection and copying by any person upon a written request. Once a once a fully executed contracts is received, the content of all vendor Bids are subject to FOIA's public disclosure obligations and exemptions.

The State of Delaware wishes to create a business-friendly environment and procurement process. As such, the State respects the vendor community's desire to protect its intellectual property, trade secrets, and confidential business information (collectively referred to herein as "confidential business information"). Bids must contain sufficient information to be evaluated. If a vendor feels that they cannot submit their Bid without including confidential business information, they must adhere to the following procedure or their Bid may be deemed unresponsive, may not be recommended for selection, and any applicable protection for the vendor's confidential business information may be lost.

In order to allow the State to assess its ability to protect a vendor's confidential business information, vendors will be permitted to designate appropriate portions of their Bid as confidential business information.

STATE OF DELAWARE
NEW CASTLE COUNTY VO-TECH SCHOOL DISTRICT

Vendor(s) may submit portions of a Bid considered to be confidential business information in a separate, sealed envelope labeled "Confidential Business Information" and include the specific RFP number. The envelope must contain a letter from the Vendor's legal counsel describing the documents in the envelope, representing in good faith that the information in each document is not "public record" as defined by 29 *Del. C.* § 10002, and briefly stating the reasons that each document meets the said definitions.

Upon receipt of a Bid accompanied by such a separate, sealed envelope, the State of Delaware will open the envelope to determine whether the procedure described above has been followed. A vendor's allegation as to its confidential business information shall not be binding on the State. The State shall independently determine the validity of any vendor designation as set forth in this section. Any vendor submitting a Bid or using the procedures discussed herein expressly accepts the State's absolute right and duty to independently assess the legal and factual validity of any information designated as confidential business information. Accordingly, Vendor(s) assume the risk that confidential business information included within a Bid may enter the public domain.

Any such news or advertising releases pertaining to this solicitation or resulting contract shall require the prior express written permission of the State of Delaware.

The State will not prohibit or otherwise prevent the awarded vendor(s) from direct marketing to the State of Delaware agencies, departments, municipalities, and/or any other political subdivisions, however, the Vendor shall not use the State's seal or imply preference for the solution or goods provided.

Appendix A

NCCVT is seeking the below item or one of equal quality and specifications. Prices should include shipping, delivery, installation, and training.

- One MAKO (or equal) SSCFS2 Containment Fill Station with Priority Fill System as per specifications that includes the BAM06H-E3 Breathing Air Module as per attached specifications with special 5.5 Air Switch (or equal) and four bottle ISO 6000 PSI Air Storage system (or equal) to be connected to new fill station.

Enclosed Containment Fill Station

Model SSCFS2-HP (or equal)

The fill station shall be designed for stationary applications. The unit shall be totally enclosed, constructed of ¼ inch plate steel and designed to contain an SCBA or SCUBA cylinder and metal fragments in the event of rupture during the filling process. The fill station shall be designed to vent rapidly expanding air away from the operator.

The fill station shall be ergonomically designed to allow the filling of two (2) SCBA or SCUBA bottles (120 cubic foot) either separately or simultaneously. The maximum length of the SCBA or SCUBA bottle with the valve and fill adapter shall be 31 inches.

The fill station containment design must be third party certified to meet NFPA 1901-2016 standards. The certificate must be included with the bid or request for quotation and included with the operator's manual when the system is shipped. Access to the enclosure for loading the SCBA cylinder shall be via a manually operated, tilt out door. The fill station door shall be provided with assisting devices to assure smooth operation and reduce operator fatigue. The fill station door shall be constructed of ¼ inch plate steel. The SCBA cradle shall contain two (2) fill positions. Each fill position shall be lined with material to protect each SCBA or SCUBA cylinder from abrasion. The carriage shall be mounted on a pivoting system that will lower the cylinders to a near horizontal position and allow full access to all SCBA or SCUBA bottles, fill hoses and valve assemblies with minimal operator fatigue.

To ensure operator protection, a fully automatic safety interlock that prevents SCBA or SCUBA cylinder filling until the door is completely closed shall be provided. Two (2) fill hoses each equipped with an SCBA or SCUBA fill adapter, isolation valve and bleed valve shall be provided and located within the enclosure.

To prevent over pressurization the fill enclosure shall be protected by a safety relief valve. The relief valve can either be set for 4800 psig for filling 4500 psi SCBA's or 5800 psig for filling 5500 psi SCBA's.

A painted steel fill panel shall be mounted on the front of the unit.

The piping of air storage shall be arranged for bulk filling. The air storage system shall be supplied with a priority fill system manifold designed to automatically feed air from the breathing air compressor and air storage system to the SCBA fill station. When SCBA fill operation ceases, air from the compressor will be

STATE OF DELAWARE
NEW CASTLE COUNTY VO-TECH SCHOOL DISTRICT

diverted to top-off the air storage system before shutting off. Anytime that the operator resumes the SCBA fill process, the compressor will flow to the fill station as the priority. Due to the potential narrow differential between air storage pressure (6000 psig) and SCBA fill pressure (5500 psig), priority fill systems utilizing a pressure maintaining valve will not be accepted. This priority fill system must be specifically designed to work with the narrow differential pressure involved in this application.

As a minimum, the air control panel must include the following:

- Inlet pressure gauge.
- Adjustable, 0-6000 psig self-relieving regulator.
- Regulated outlet pressure gauge.
- Compressor pressure gauge.
- Storage pressure gauge.
- SCBA/SCUBA cylinder fill control valve.
- SCBA/SCUBA cylinder fill pressure gauge.
- Regulated auxiliary with flow control valve and outlet on rear of fill station (for hose reel).

Breathing Air Module

Model BAM06H (or equal)

The entire breathing air module shall be integrated into a single, free-standing unit. The outer frame shall be of heavy-duty construction consisting of welded two inch square tube. To minimize radiant sound level the enclosure shall contain sound absorbing material.

The unit shall be designed to allow installation flush against a wall without inhibiting cooling air flow or maintenance access. The complete system shall not exceed the following dimensions.

31 ¼" (W) X 42" (D) X 66" (H)

The breathing air module shall be factory assembled and tested to assure quality and reliability. The system scope of supply shall be housed within the confines of the sheet metal enclosure; to include: UL listed electrical panel, purification system, muffler reservoir and pressure bearing components as follows:

Compressor: The compressor block shall be four stage, air cooled, pressure oil lubricated of "V" configuration and rated for continuous duty at 6000 psig with a charging rate of 14.0 cfm. The crankcase shall be of all cast iron construction, fully enclosed and support an iron crankshaft with oversized ball bearings on each end. Only two connecting rods shall be utilized. Each connecting rod shall be equipped with needle bearings on each end for long life. All pistons shall be of the captive design, manufactured of aluminum or steel and incorporate rings on all stages. Cylinders shall be of aluminum or cast iron construction with deep cooling fins to provide maximum heat dissipation. The compressor flywheel shall incorporate a high velocity fan to remove heat from the compressor. Cooling air flow from the fan shall be a minimum of 3000 cfm. Individually mounted intercoolers shall be utilized after each stage of compression and the aftercooler shall be designed to deliver final air at a temperature not to exceed 18 degrees F above ambient. Suction and delivery valves shall be designed in such a manner that they can be replaced without replacing the entire assembly. Valve inspection covers are to be provided on the first and second stage cylinders. Relief valves shall be utilized after each stage of compression.

STATE OF DELAWARE
NEW CASTLE COUNTY VO-TECH SCHOOL DISTRICT

The pressure lubrication system shall include an oil pump to supply metered quantities of lubricant directly to the fourth stage piston through a regulator and replaceable spin-off type, full flow filter. The oil pump shall be directly driven off of the crankshaft. Belt driven pumps shall not be acceptable. An oil level sight glass shall be provided for checking the crankcase oil level.

The compressor system shall have a moisture separator after every stage of compression. An automatic drain system shall be supplied to periodically discharge accumulated condensation from each moisture separator during operation and whenever the unit shuts down.

Compressor systems requiring cool down or (unloaded running periods) and those that require auxiliary cooling fans are not acceptable. The compressor system must be rated for continuous operation with no intermittent duty cycles. The compressor manufacturer shall have an ISO 9001 quality management system standard approval on the design and manufacture process.

Compressor Enclosure: The breathing air module shall be fully enclosed with solid steel panels, minimum thickness 14 gauge. All sections of the compressor enclosure shall be lined with sound absorbing material.

An air ducting system that allows against-the-wall installation by drawing cooling air from below the unit and directing it upwards and away from the operator and control panel shall be provided.

Insulated and gasketed maintenance access doors equipped with quarter turn latches shall be located on both sides and in front of the compressor system.

These latches shall be designed to draw the access doors into the frame opening. Male-female hinges on side doors shall be used to allow their fast and easy removal without requiring hand tools.

The underside of the cabinet shall be grated to prevent debris from entering the compressor compartment.

Auto Drain Muffler/Reservoir: An automatic drain muffler/reservoir system, manufactured of 14 gauge steel, shall be incorporated into the package. The reservoir shall be designed to capture discharged condensation without the need for piping to the outside and to reduce the discharge noise level. A conveniently located valve shall be supplied on the outside of the cabinet to periodically drain the condensate accumulated in the muffler/reservoir at atmospheric pressure.

Electric Motor: NEMA designed B, 2-pole, 10 horsepower, open drip proof motor shall be furnished for 3 phase, 60 hertz, 230 volts. The motor shall be suspended underneath the compressor baseplate. This baseplate shall incorporate rubber shock mounts, which isolates vibration from the rest of the cabinet. The V-belt drive shall be guarded to meet OSHA requirements.

Purification System: The purification system and replacement filter cartridges shall be manufactured by the same company as the compressor package. The system shall be a multi-chamber arrangement each constructed of 7075T6 aluminum alloy with a tensile strength of 83,000 psi and designed for 6000 psi working pressure with a 4 to 1 safety factor. The first chamber shall be a mechanical separator to eliminate oil and water. Subsequent chambers shall utilize replaceable filter cartridges constructed of high strength, non-corrosive FDA grade polycarbonate plastic. The cartridges shall be designed to remove water vapor, hydrocarbons, noxious gases, taste and odors.

Systems requiring depressurization to check filter condition shall not be acceptable. Carbon monoxide shall also be eliminated by catalytic oxidation.

STATE OF DELAWARE
NEW CASTLE COUNTY VO-TECH SCHOOL DISTRICT

The purification system shall process 34,200 cf (with a 70o F inlet temperature) before cartridge replacement. The air delivered shall meet CGA grade D & E and NFPA 1989 (2019 edition) air quality standards.

Control System: The unit shall include all necessary controls to assure efficient operation and monitor compressor performance. All necessary electric motor controls shall also be included and rated for NEMA class 12. As a minimum, the control system shall include the following:

- Air pressure switch to automatically start and stop the unit in order to maintain system pressure.
- High air temperature shutdown.
- Direct online IEC starter package with a 24 volt control voltage.
- PLC controller.
- Illuminated power “on” switch.
- Independent “start” and “stop” push button switches.
- Emergency stop button.
- Low oil pressure switch.

Instrumentation: The unit shall include all necessary gauges and lights necessary to indicate all normal and shutdown conditions. All gauges, lights and indicators shall be mounted on a steel control panel centrally located on the front of the unit and also within the cabinet.

As a minimum, the instrumentation panels shall include the following:

- Compressor interstage and final air pressure gauges.
- Hour meter.
- High air pressure shutdown light.
- High air temperature shutdown light.
- Low oil pressure light.

Overtime timer: The PLC controller on the compressor is equipped with an overtime timer feature which can be set from 0 to 10 hours. This feature can prevent the compressor from running for extended periods of time when unsupervised. The overtime timer is factory set for 4 hours.

Separator cycle counter: The PLC controller on the compressor is equipped with a cycle counter that will log every time the final separator is depressurized.

Optional Accessories

Carbon monoxide monitoring system:

The CO monitor shall be mounted on the compressor operations panel.

- Shall be piped into the air flow downstream of the purification system
- Shall be tamper-resistant requiring a keystroke sequence to access monitor controls.
- Must have a warning light, audible alarm & shutdown for high concentrations of CO.
- Shall reliably detect CO concentrations from 0 to 10 ppm. A digital readout shall continuously indicate the amount of CO in the compressed breathing air.
- Must be capable of adjustment at any point on the monitor between 5 to 10 ppm for shutdown.
- The unit shall automatically go through the calibration process every 90 days.
- Ship-loose CO Calibration kit complete with test gas valve/regulators, test gas cylinder clamps, tubing, & tubing quick disconnects.
- The system shall come complete with solenoids to control system calibration.

CMM Air Monitoring System:

The CMM is a dual monitor for both CO & moisture. It will include our standard CO monitor (see above) and the Moisture monitor with cartridge detection below:

Moisture monitor (Cartridge monitoring system):

The cartridge monitoring system shall be mounted on the compressor operations panel. The system is designed to monitor the quality of air being discharged after the compressor's purification systems. The system continuously evaluates the moisture content of the purified air and also confirms the presence of the cartridge filter in the purification chamber. The complete system consists of the following:

- A. Moisture monitor probe
- B photo cell cartridge detection sensor
- C. Microprocessor control unit
- D. Cartridge "ok" green light
- E. Cartridge life warning light
- F. Cartridge expired red warning and compressor shutdown
- G. Install filter text message

The cartridge monitoring system operating procedure is as follows:

- Cartridge detection: In the event that a cartridge filter is not installed in the purification chamber, a text message will be displayed and the compressor will not start. This same condition will also occur in the event that any electrical connections in the system are faulty or otherwise not made. Note that mechanical devices, which could be subjected to corrosion, are not utilized.

- Moisture monitor: Upon start-up of the compressor, the moisture monitor probe (a) will continuously monitor the moisture content of the air stream at pressure. A timing device within the microprocessor control unit (a) is activated upon start-up to allow the moisture sensor to stabilize. This time cycle is operative for 8 to 15 minutes. During this cycle, the cartridge "ok" green light (d) will be flashing. Once the stabilization period is complete, the applicable status light for the moisture level will illuminate.

- Status light conditions:

Cartridge "OK" green light (d): This light will remain illuminated as long as the moisture level in the air stream is within pre-set limits. This light flashes during the initial stabilization cycle.

Cartridge life warning yellow light (e): This light will illuminate when the moisture level in the air stream approaches the pre-set limit. During this time, approximately one hour duration, the air quality is within acceptable levels.

Cartridge expired red warning light (f): This light will illuminate when the moisture level in the air stream exceeds the pre-set limit. The compressor unit shuts down under this condition.

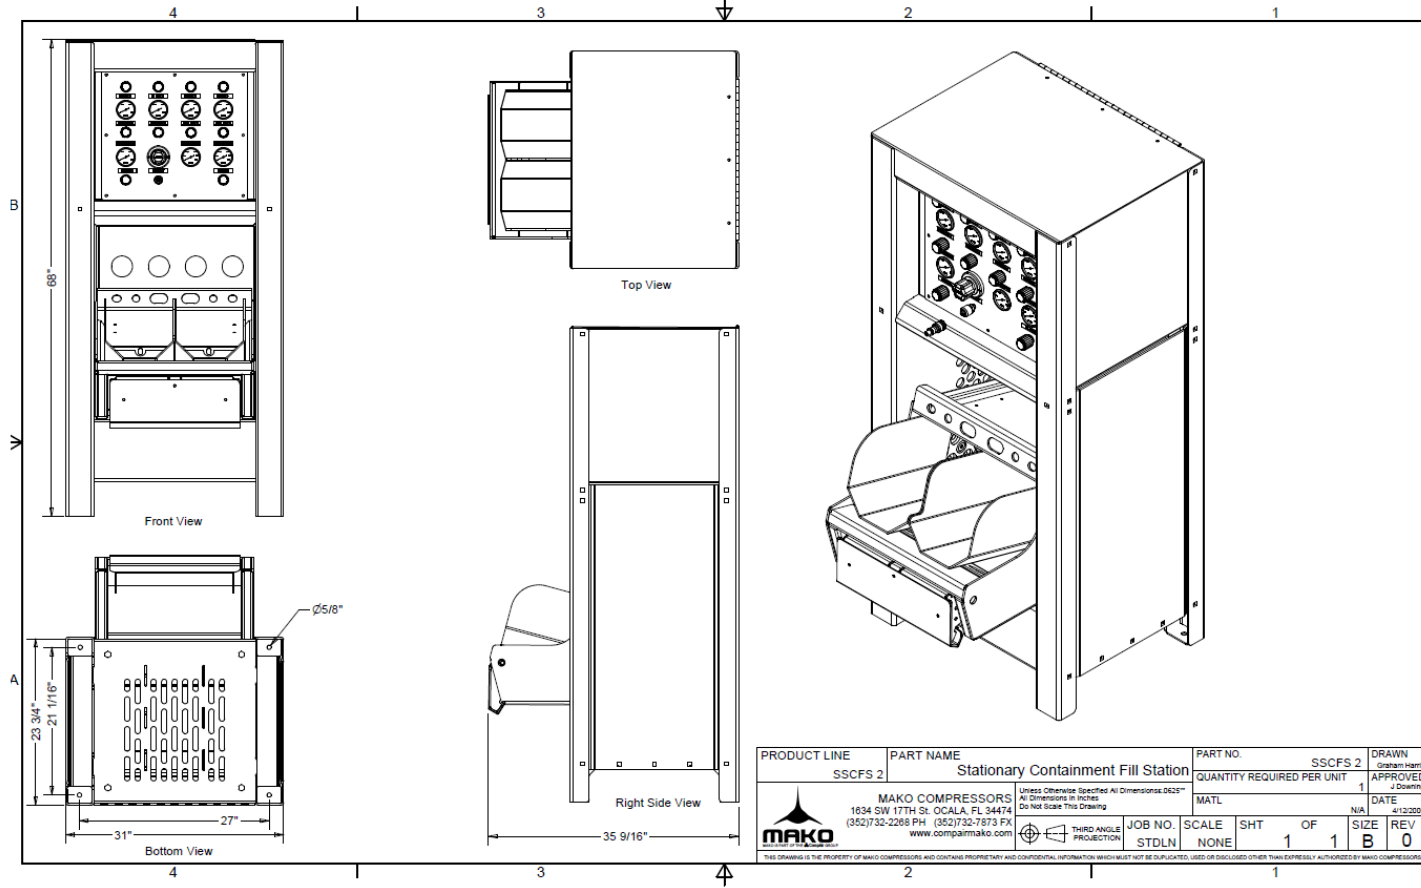

- Adjustable timed cycles and moisture limits: All timed cycles and moisture limits which are not specified will be factory pre-set as follows:

- 15 minutes for initial moisture probe stabilization.

- The air stream moisture limit will be preset at -65 degrees F atmospheric dewpoint (24 ppm water vapor content) in accordance with recommendations by NFPA 1500. Other dewpoint limits can be set provided that the following are known:

- Operating pressure
- Mean ambient temperature
